

OCI Vision & Oracle Analytics

Just like a Box of Chocolates

Presented By: Žiga Vaupot  Oracle ACE Pro

Date: Rovinj, 19. 10. 2023

Company Classification: Controlled

Introducing Version 1 – Your Partner in Success

A leading Digital Transformation provider of cloud-based applications, data and platform development, modernisation, testing and next-generation managed services.

25 Years

Proving Value of I.T. and working with Oracle solutions with **240+** Oracle Projects

700+

Customers
98% Customer retention

€350M+

Revenue

12 Years

Voted as a Great Place to Work

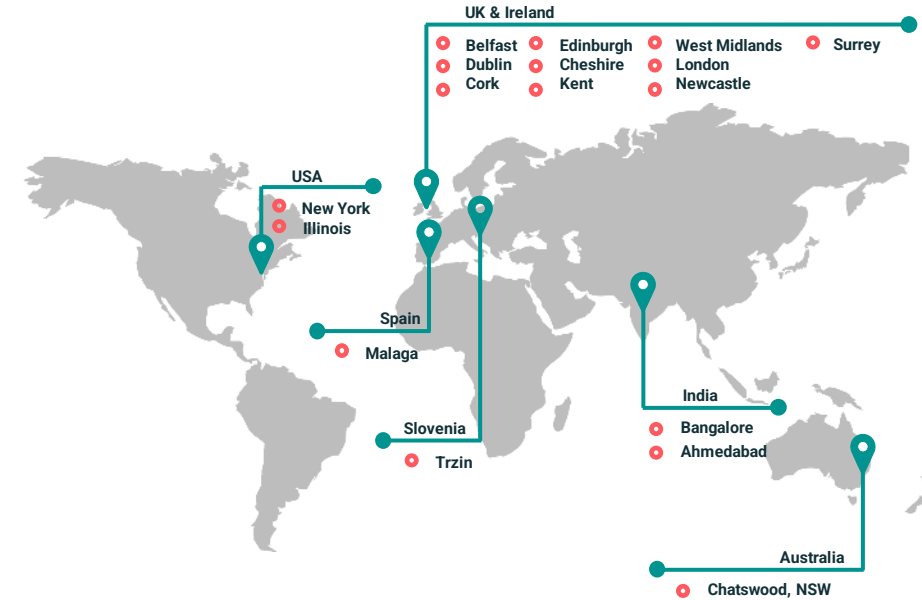

Industry Best Practice

Top Tier Deep Technology Partners

3200+ Employees across our 17 offices worldwide:

Recent Acquisitions

Automation Logic
DevOps transformation and delivery

Qubix
Ready-to-run Oracle Solutions

Oracle Strategy - We understand Oracle like no other

One of the largest Oracles Practices in Europe

700+

dedicated ERP Consultants delivering solutions and services to **300+ customers**

500+

Oracle Certified Professionals with specialisation delivery across the entire stack

Premier Oracle Partner

With a track record that extends over **25 years**

Clients across all industry sectors

Providing complete end-to-end solutions

Our work is award winning

- **GOLD: UKOUG ERP Partner of the Year Award**

- **GOLD: UKOUG HCM Partner of the Year Award**

- **GOLD: UKOUG Managed Services (Outsourcing and Operations) Partner of the Year Award - Applications**

We are experts in Oracle ERP, SCM, EPM, HCM and Analytics

Oracle Cloud Apps (SaaS)

Leading experts in enabling enterprises to harness the power of Oracle Cloud Apps (ERP,EPM/HCM/Payroll/SCM) in an increasingly complex technology landscape, we help organisations to transition smoothly from legacy solutions to Oracle Cloud Applications.

E-Business Suite

Experts in managing E-Business Suite implementations, upgrades and managed services for enterprise organisations across a broad range of sectors. We are responsible for some of the largest European implementations of E-Business Suite.

JD Edwards

Our JD Edwards experts offer leading enterprise customers in manufacturing industries the complete range of services required to license, install, implement and maintain their JD Edwards systems, from legacy through to World A9.2 and EnterpriseOne 9.2.

Peoplesoft

Experts in managing Peoplesoft implementations, upgrades and managed services for enterprise organisations across a broad range of sectors. We are responsible for over 200 Peoplesoft projects across 125 customers.

Recognised experts in Oracle Cloud

ORACLE | Service Partner
Expertise in Oracle ERP Financials Cloud in EMEA-UKIE

ORACLE | Service Partner
Expertise in Human Resources (Core) in EMEA-Western Europe

Cloud Program

ORACLE | Service Partner
Expertise in CSPE: Oracle Cloud Platform - Oracle E-Business Suite Applications to Oracle Cloud in EMEA-Western Europe

ORACLE | Service Partner
Expertise in Oracle Cloud Platform Integration in EMEA-Western Europe

ORACLE | Service Partner
Expertise in PeopleSoft Applications to Oracle Cloud in EMEA, Western Europe

ORACLE | Service Partner
Expertise in Oracle E-Business Suite Applications to Oracle Cloud in EMEA-Western Europe

Delivering customer success in Oracle Applications

The Task

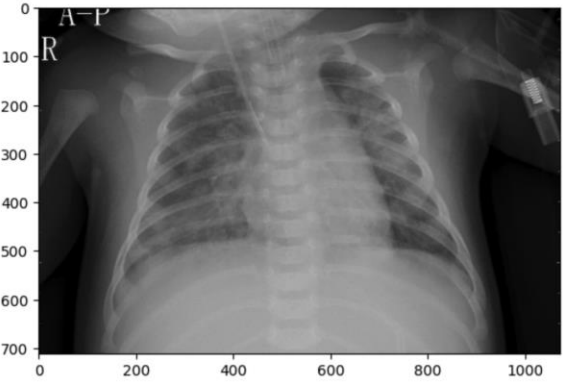

- Library of Chest X-Ray images*
- Train the model and identify which patients have pneumonia!

* Dataset source: <https://www.kaggle.com/datasets/paultimothymooney/chest-xray-pneumonia>

First thought: OCI Data Science

```
[8]: img = cv2.imread("kaggle/input/chest-xray-pneumonia/chest_xray/chest_xray/val/PNEUMONIA/person1946_bacteria_4875.jpeg")
[9]: plt.imshow(img)
plt.show()
```

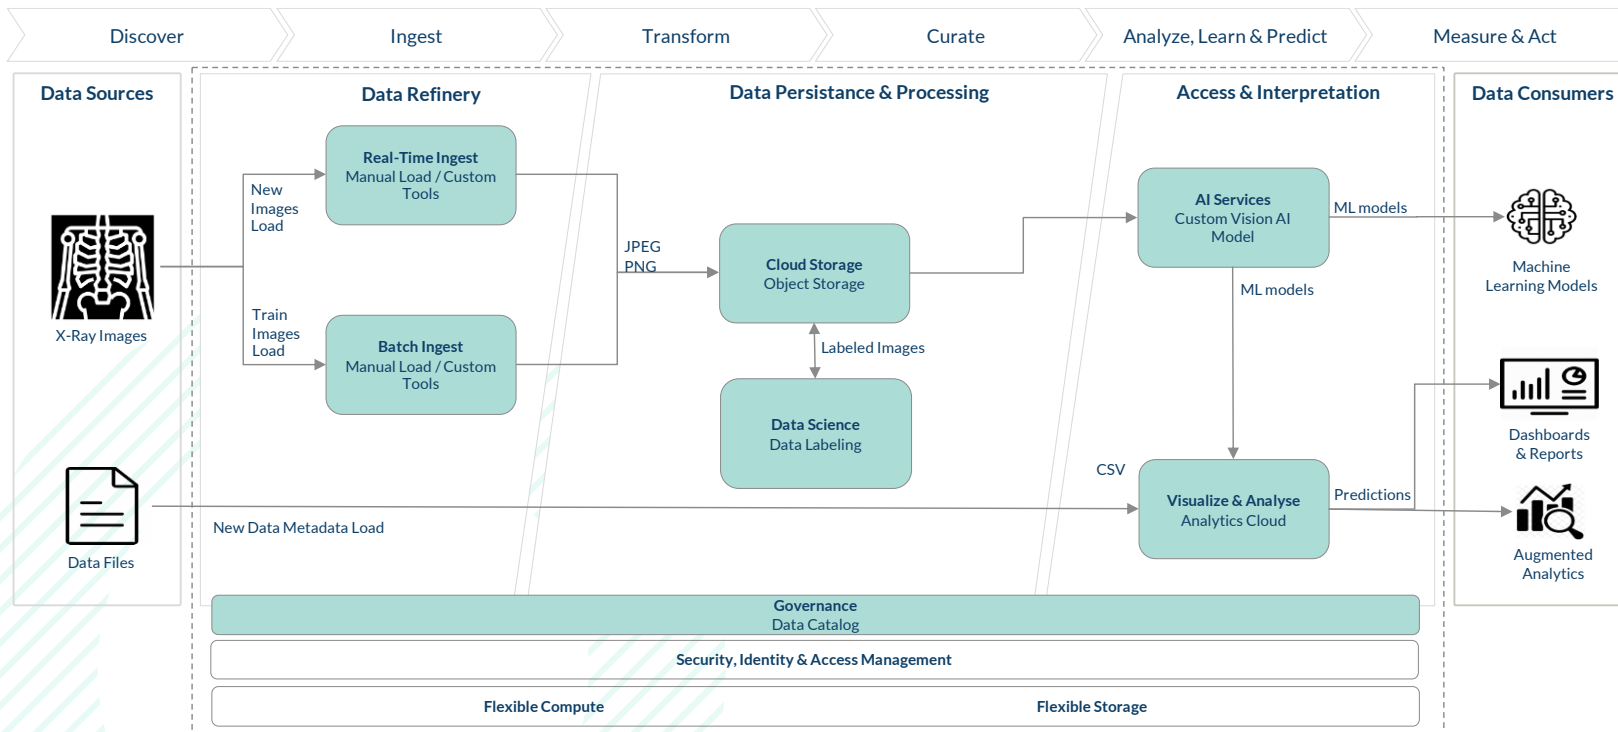

```
Data Preparation
[10]: img_size = 150
labels = ["NORMAL", "PNEUMONIA"]

def data_prep(data_dir):
    data = []
    for label in labels:
        path = os.path.join(data_dir, label)
        class_num = labels.index(label)
        for img in os.listdir(path):
            # print(os.path.join(path, img))
            # clear_output(wait=True)
            if img.endswith('.jpeg'):
                img_arr = cv2.imread(os.path.join(path, img), cv2.IMREAD_GRAYSCALE)
                resize_arr = cv2.resize(img_arr, (img_size, img_size))
                data.append([resize_arr, class_num])
    return np.array(data)

[11]: train = data_prep('kaggle/input/chest-xray-pneumonia/chest_xray/chest_xray/train')
test = data_prep('kaggle/input/chest-xray-pneumonia/chest_xray/chest_xray/test')
val = data_prep('kaggle/input/chest-xray-pneumonia/chest_xray/chest_xray/val')
```

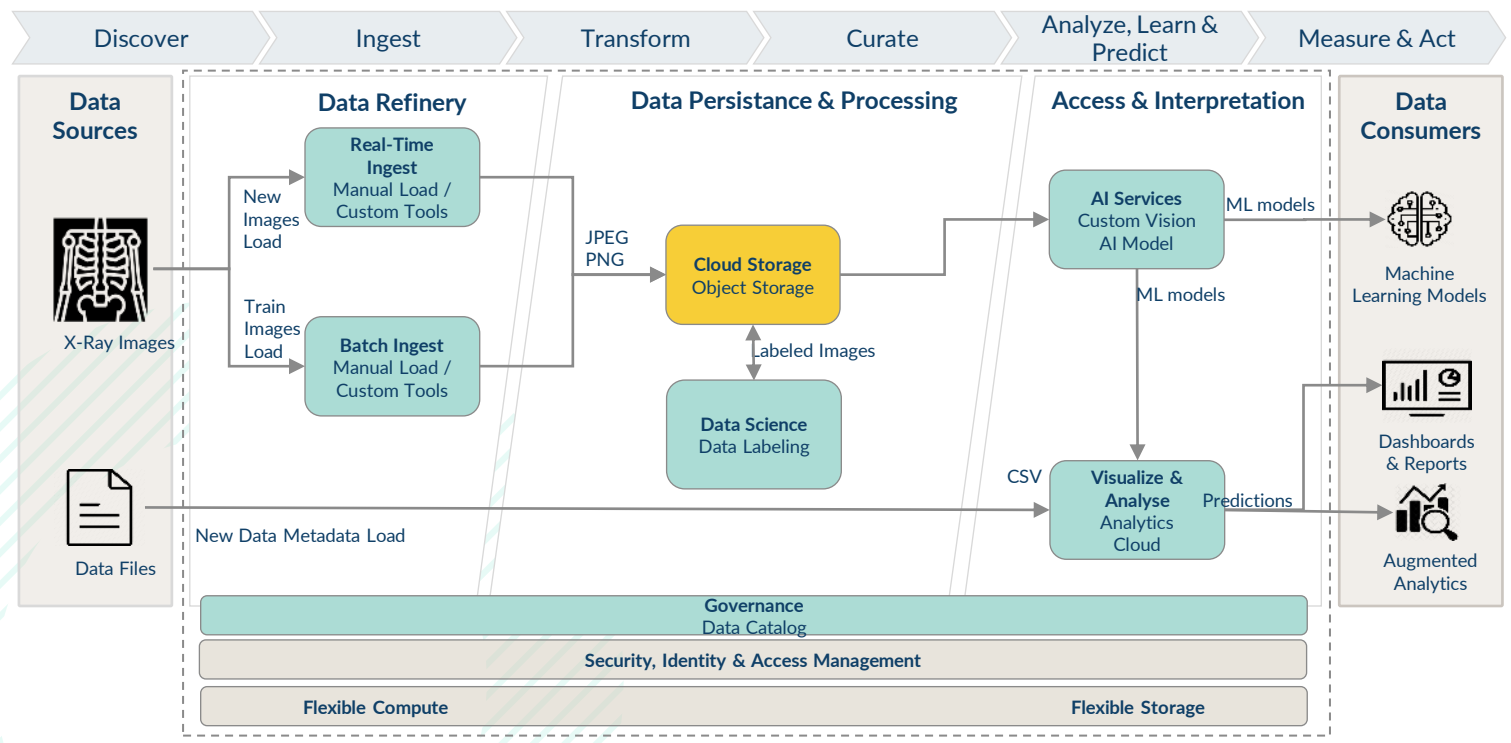

- Let's do some coding in Python and train the classification model.
- Then analyze X-Ray images and learn if any of them show pneumonia.

Alternative: Why not use OCI and its AI Services instead?

- All X-Ray images can be stored in **Object Storage**.
- X-Ray images can be labeled by **Data Labeling** service.
- **Vision AI** service can be used to train a custom model for Image Classification.
- For predictions and further analysis **Oracle Analytics** can be used.

Object Storage

- Internet-scale, high-performance storage platform that offers reliable and cost-efficient data durability.
- Stores an unlimited amount of unstructured data of any content type, including analytic data and rich content, like images and videos.

Image Bulk Upload

Upload can be done by using:

- Console upload utility
- Command Line Interface (preferred in case of “many” objects)

Image upload using Cloud Shell (CLI)

```
$ ### Download images from Kaggle
$ wget -x -c --load-cookies kaggle_cookies.txt
https://www.kaggle.com/datasets/paultimothymooney/chest-xray-
pneumonia/download?datasetVersionNumber=2

$ ### Unzip downloaded images
$ mkdir pneumonia-dataset
$ unzip www.kaggle.com/datasets/paultimothymooney/chest-xray-
pneumonia/download\?datasetVersionNumber\=2 -d pneumonia-dataset/

$ ### Upload images into your bucket
$ oci os object bulk-upload -ns frly8pi3k85f -bn X-Ray-Images-for-Training --src-
dir /home/X_Ray/pneumonia-dataset/chest_xray/chest_xray/train --overwrite --
content-type 'image/jpeg'
```

Data Labeling

- OCI based service that is used to build labeled data sets.
- In case of images, we need to assign a label to an image, which describes the image and classifies it

Image Data Labeling

Image labelling can be done:

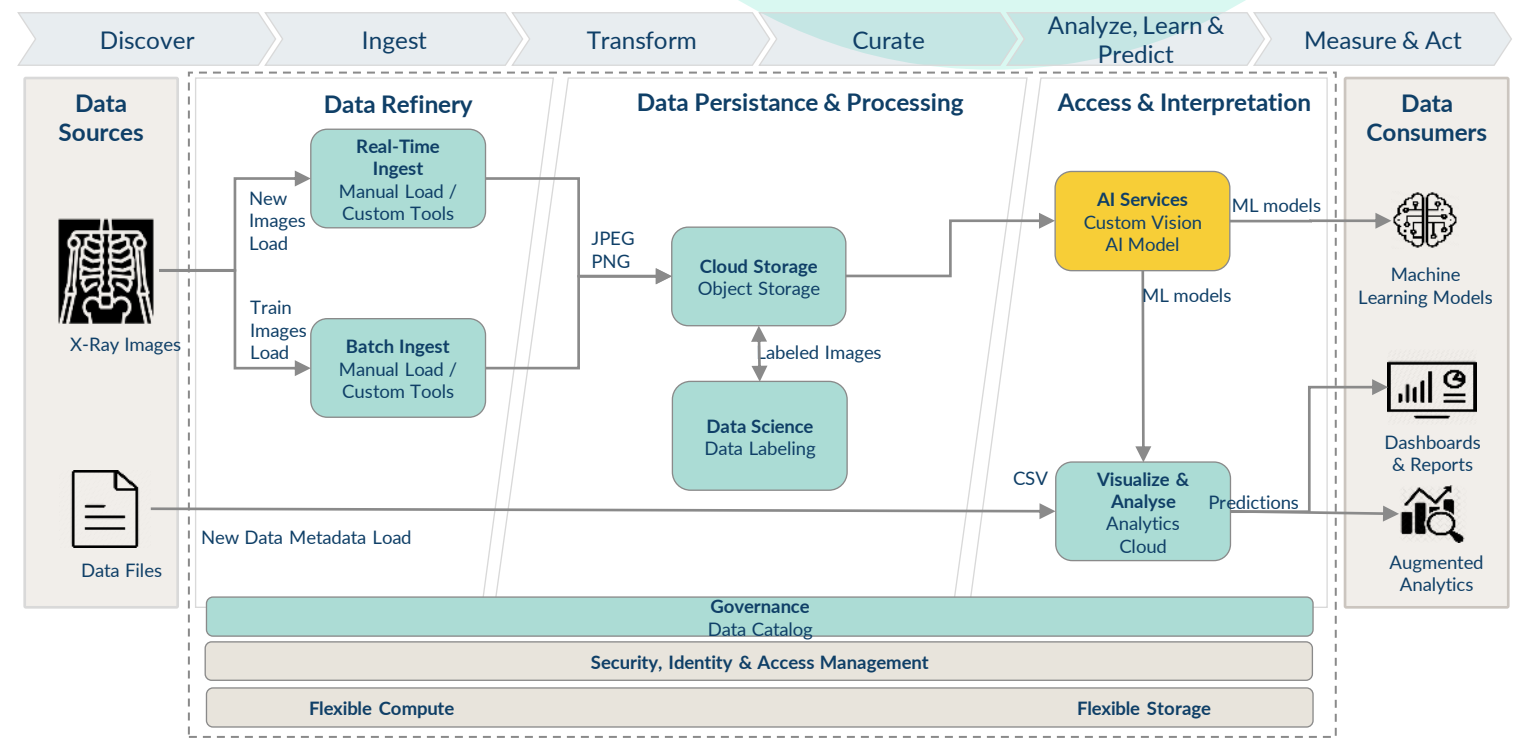

- **Manually** by using graphical user interface and assigning labels to images one by one
- **Programmatically**, for example by using regular expressions or similar.

```
import dls_list_records
import dls_create_annotation
import sys
from config import *
import datetime
import labeling_schemes.first_letter as first_letter
import labeling_schemes.first_match as first_match

def main():
    num_records = list_records_limit
    count_batches=1
    count_records_total=0
    while num_records == list_records_limit: # if num_records < list_records_limit,
that would indicate the last loop i.e. batch
        names, ids, num_records = dls_list_records.main()
        count_records_in_batch=0
        for n in names:
            if labeling_algorithm == "first_match":
                first_match.main(name=n,
record_id=ids[count_records_in_batch])
            elif labeling_algorithm == "first_letter":
                first_letter.main(name=n,
record_id=ids[count_records_in_batch])
            count_records_in_batch+=1
            count_records_total+=1
            print("current time: " + str(datetime.datetime.now()))
            print("current batch #: " + str(count_batches))
            print("# records labeled in current batch: " +
str(count_records_in_batch))
            count_batches+=1
        count_batches-=1
        print("----")
        print("TOTALS:")
        print("current time: " + str(datetime.datetime.now()))
        print("# batches: " + str(count_batches))
        print("# records labeled: " + str(count_records_total))
        print()
main()
```

- OCI Vision is a serverless, multi-tenant service, accessible using the Console, or over REST APIs.
- Upload images to detect and classify objects in them.
- Process images in batch using asynchronous API endpoints

How Vision AI works?

Oracle Analytics

- Complete platform with ready-to-use services for a wide variety of workloads and data. Offering valuable, actionable insights from all types of data in the cloud, on-premises, or in a hybrid deployment.
- Empowers business users, data engineers, and data scientists to access and process relevant data, evaluate predictions, and make quick, accurate decisions.

Oracle Analytics and Vision AI working together

- Set connection to Vision AI
- Prepare a dataset containing image locations
- Register Vision AI model in Oracle Analytics
- Process images using Data Flows
- Visualize and perform analysis
