Boolean Datatype

Few Changes for SQL in Oracle Database 23c

Boolean Datatype

```
SQL> alter table oehr_employees
  2  add ( on_holiday boolean default false not null)
  3* /

Table OEHR_EMPLOYEES altered.
```

```
SQL> update oehr_employees
  2  set on_holiday = true
  3  where employee_id <= 110
  4* /

11 rows updated.
```

```
SQL> select count(*)
  2  from oehr_employees
  3  where on_holiday
  4* /

  COUNT(*)
----------
        11
```

Table
A table is a unit of data storage in an Oracle database, containing rows and columns.
View
A view is a logical representation of another table or combination of tables.
Package
A package is a database object that groups logically related PL/SQL items, such as types, functions and procedures.

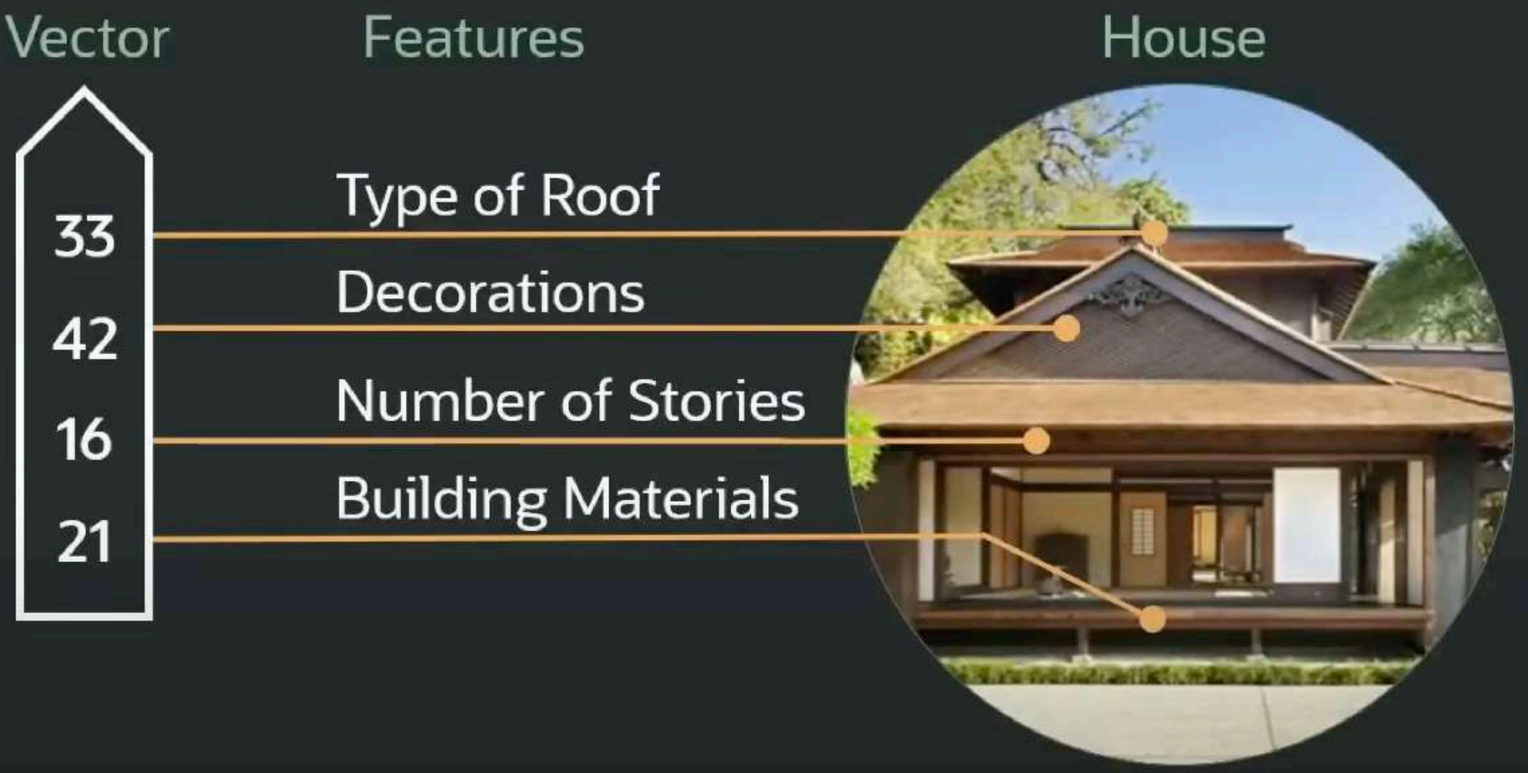
AI Vector Search

Example: the features for a house image could be



Each dimension represents a different feature of the house

The distance between the vectors is proportional to their semantic similarity

Oracle Database 23c can store vectors using a new vector data type

```
CREATE TABLE house_for_sale (house_id     number,
                             price        number,
                             city         varchar2(400),
                             house_photo  blob,
                             house_vector vector

);
```

Allows finding data that is semantically similar to an input

Find houses that are similar to this picture

```
SELECT   …
FROM     house_for_sale
ORDER BY vector_distance(house_vector, :input_vector);
```

Allows queries that combine AI vector search with business data about customers and products

Find houses that are similar to this picture and match the customer's preferred city and budget

```
SELECT …
FROM   house_for_sale
WHERE  price <= (SELECT budget      FROM customer …)
AND    city  in (SELECT search_city FROM customer …)
ORDER BY vector_distance(house_vector, :input_vector);
```
